AutoCAD LT is generally used for tasks requiring basic drafting, such as creating floor plans, working with building components, or building sets. AutoCAD LT 2019 is generally used for tasks requiring basic drafting, such as creating floor plans, working with building components, or building sets. AutoCAD LT 2019 and AutoCAD LT 2020 offer improved file compatibility, security, and performance, but require a newer Windows operating system (OS), such as Windows 10. The two variants are essentially the same, except that AutoCAD LT 2020 features the integrated symbol library and the BIM Workbench. It is also possible to use either AutoCAD LT 2019 or AutoCAD LT 2020 with the AutoCAD standard version (AutoCAD 2017), which adds a greatly expanded set of functionality. AutoCAD 2017 is referred to as the "traditional" or "full" version, but also includes product enhancements that were not in previous versions, such as the object-based modeler. AutoCAD LT 2019 and AutoCAD LT 2020 are not compatible with AutoCAD 2017. AutoCAD LT is designed for use in educational and training environments. AutoCAD 2013 introduced the concept of "Acadence", which combines the worlds of 3D and 2D design within the same application. An Academy can be joined by any number of individual design professionals who may work at separate times within the Academy context, though the architecture tools remain mutually exclusive from each other. AutoCAD 2014 added the concept of "Workgroups", which let designers work together within the same Academy and be available for similar roles, but still separate from one another. AutoCAD 2014 is designed to work in a Linux environment, with the exception of the DWG files. The Windows executable is shipped with MS Office 2008 or later, which adds the ability to open and save these files. AutoCAD 2015 introduced the concept of "Plant".
